Customer Support Work Samples

Customer Support · Digital Hospitality Operations · APAC

Profile

Customer support professional with hands-on experience supporting international guests across three hospitality properties, including two unmanned self check-in locations and one staffed property.

Experienced in digital hospitality operations using Cloudbeds HMS/PMS, cloud-based self check-in, QR-code smart locks, online payment platforms, OTA systems, and remote customer communication tools.

I am comfortable supporting customers through phone calls, messaging platforms, email, and face-to-face communication. I speak Mandarin Chinese natively and communicate in English at B2 level.

I am especially interested in technology, SaaS, AI, and how digital tools can improve customer experiences. I enjoy learning new systems and became comfortable with the main digital platforms and operational workflows used in my hospitality role within approximately one month.

Digital Tools & Platforms

Hospitality & Booking

Cloudbeds HMS/PMS · Booking.com · Agoda · Airbnb · Expedia

Digital Operations

SOONINN Cloud Self Check-in · QR-code Smart Locks · ECPay

Customer Communication

LINE · WhatsApp · Email · Phone · OTA Messaging

English — B2

How I Work

Listen → Understand → Investigate → Find a practical solution → Communicate clearly

Good customer support is not only about solving a system issue — it is about helping the customer continue toward their goal.

The following work samples are based on real customer support situations from my hospitality experience. Customer information and interface elements have been anonymized or recreated to protect privacy.

WORK SAMPLE 01

Resolving a Digital Self Check-in & QR Smart Lock Issue

Digital Operations · Troubleshooting · Customer Support

Background

I supported guest operations across three hospitality properties. Two operated with unmanned self check-in, while the property where I was based had a staffed front desk.

We used **SOONINN**, a cloud-based self-service check-in system with QR-code smart locks, and **Cloudbeds HMS/PMS** to manage reservations, guest information, room status, and payment records.

Customer Issue

An international guest staying at one of the unmanned properties repeatedly received an error when entering their passport number during online self check-in. As a result, the guest could not complete check-in or receive the QR code required to enter the room.

The exact technical cause could not be confirmed remotely.

My Approach & Solution

Rather than asking the guest to repeat the same unsuccessful process, I focused on the guest's immediate goal: completing check-in and accessing the room.

I asked the guest to come to the staffed property, assisted them in person, and accepted the payment in cash. I then recorded the payment correctly in **Cloudbeds PMS** to keep the reservation records accurate.

After completing the required check-in steps, I generated the room-access QR code and sent it directly to the guest through **WhatsApp**.

Result

The guest successfully accessed the room despite the original technical issue, and the reservation and payment records remained accurate in Cloudbeds.

This case demonstrates my ability to work across multiple digital systems, troubleshoot customer issues, and create practical solutions when technology does not work as expected.

WORK SAMPLE 02

Supporting a Japanese Guest Across a Language Barrier

Cross-cultural Communication · Multi-channel Support · Reservation Management

Background & Issue

A Japanese guest who booked through our official website called before their stay and asked for a Japanese-speaking staff member. No one on duty spoke Japanese.

Through simple English and careful listening, I understood that the guest wanted to change the reservation dates. Because our policy allowed only one free date change, I needed to confirm the request accurately before making any changes.

My Approach

Phone communication was difficult, so I moved the conversation to a written channel where translation tools could help.

I found the guest's email address in Cloudbeds, emailed the guest our official LINE contact information, and continued the conversation there.

Resolution

I coordinated with our reservations team to confirm the change under company policy. After approval, the reservation was updated and I added a note in **Cloudbeds** so the team could see the latest information.

The guest later stayed successfully and thanked me in person for helping with the change.

Key Takeaway

Good communication is not only about speaking the same language. Tone, patience, context, and choosing the right channel can help people understand each other.

Communication Principle

When language becomes a barrier, I focus on simplifying the message, slowing down, changing the communication channel when necessary, and confirming understanding before taking action.

WORK SAMPLE 03

Handling a Power Outage & Refund Exception

Customer Escalation · Policy Judgment · OTA Operations

Background & Issue

An unexpected external power outage affected the property, leaving guest rooms without electricity or air conditioning.

Several affected guests were frustrated and requested full refunds. However, reservations made through Booking.com, Agoda, and other OTA platforms were normally subject to a 100% same-day cancellation charge.

Because the outage was caused by an external utility issue rather than a problem inside the guest rooms, the situation did not fit our normal refund procedures.

My Approach

I first reviewed the affected reservations and the applicable OTA cancellation conditions.

Although I understood why the guests were requesting refunds, I knew that I did not have the authority to override the cancellation policy on my own.

I therefore avoided promising a refund before approval, gathered the relevant information, and escalated the situation to my supervisor so that management could decide how to handle the exception.

Resolution

After reviewing the situation, management decided to make an exception for guests who had not yet entered or used their rooms, allowing them to cancel with a full refund.

Once the decision was confirmed, I could communicate a clear and consistent resolution to the affected guests instead of giving uncertain or conflicting information.

This helped prevent further frustration while ensuring that the final decision followed both company authority and the exceptional circumstances of the incident.

Support Principle

When a situation falls outside standard policy, I avoid overpromising, gather the facts, escalate appropriately, and communicate the approved resolution clearly.
